

Automotive Technology

at Macomb Community College

Why Automotive Technology?

Automotive technology has far surpassed the days when lug wrenches and hydraulic jacks were the tools of the trade for automotive service technicians. While mechanical skills are still a must, today's automotive service technicians also have a working knowledge of the complex systems and interconnected devices that are the mark of a modern vehicle, and are skilled in the use of the advanced technology necessary to keep those vehicles on the road.

Those skilled in the latest automotive technology enjoy careers that are dynamic, rewarding and secure. When a vehicle breaks down, after all, outsourcing the repair work is not an option.

The Program

In Macomb's Automotive Technology Program, you will learn, develop and apply the skills needed to diagnose, repair and maintain the technology-driven vehicles of today, as well as tomorrow. That includes electric, hybrid and alternative-fuel vehicles.

The program is offered in a state-of-the-art facility on South Campus, where you will learn by working on a variety of vehicles using up-to-date diagnostic and repair tools and equipment.

Certified by the National Institute for Automotive Service Excellence, the program leads to a Certificate or an Associate of Applied Science Degree in Automotive Technology. You also have the option to build upon your skills by earning additional certification in:

- Automobile Service Technology
- Engine Machining
- Maintenance and Light Repair
- Master Automobile Service Technology
