

Construction Management

at Macomb Community College

What is Construction Management?

Carbon-reinforced fiberglass plastic grids now provide a corrosion-resistant alternative to steel reinforcements for concrete, while Precast Hybrid Moment-Resisting Frames are improving the integrity of new construction in earthquake zones.

Construction Management is constantly advancing as it adapts to the challenges of building dependable—and energy-efficient—structures that shelter, serve, employ and transport 21st century society.

The Program

Macomb's Construction Management program will introduce you to the latest methods and materials involved in the construction of residential and commercial buildings, bridges and other structures. You'll gain the skills and knowledge necessary to begin or advance in a construction career.

The program will also provide you with an overview of related fields, including architectural, civil and land surveying technology, so you can better understand the entire construction process.
